**Headline (120 Character Cap):** Business Analyst & Developer with over 5 years of experience in effective database administration and project management

### SUMMARY (2000-character cap)

---

As a highly accomplished and detailed-oriented technical professional, I offer extensive experience in spearheading various aspects of database management and software projects from conception to completion. I am instrumental in ensuring effective performance, integrity and security of a database while strategically planning project lifecycle. With expertise in effectively administering and maintaining database solutions, I am successful in improving business performance. In-depth understanding of various technologies helps me in effectively managing projects from business requirements analysis to solutions delivery and support.

I am Microsoft Certified Professional with hands-on experience in maintaining data standards while adhering to the data protection act. By showcasing strong analytical, problem-solving and decision-making skills and passion to deliver exceptional/quality service, I have been successful in building productive partnerships. Through outstanding team collaboration and relationship management skills, I always identify and provide solutions for projects and operational issues relating existing and proposed data flows. My core skills include, maintaining data standards, writing database documentation, involving in capacity planning, installing new applications and ensuring database integrity/security.

### SKILLS

---

- Project Management and Delivery
- Client Relationship Management
- Budget and Cost Control
- Agile Methodologies Implementation
- Change and Risk Management
- Root Cause Analysis
- Process Redesigning
- Cross-Functional Team Management
- IT Skills Gap Analysis
- Performance Optimisation
- Aligning IT Strategy with Business Strategy
- Project Lifecycle Development
- Project Control
- Negotiation and Customer Service Relationship
- Strategic Planning
- Stakeholder Management
- Solution Delivery and Integration
- Technical Support
- Quality Assurance
- High-end Technology Consulting

### WORK EXPERIENCE (2000-character cap)

---

**Various Projects and Roles | PitechPlus – Cluj-Napoca, Romania & Paris, France**

**Dec 2010 – Present**

With PitechPlus, I have successfully handled and led various projects while leading and directing team members towards delivering full development lifecycle solutions. I am accountable for identifying and escalating project related issues and providing appropriate solutions. Closely working with other staff helped in building a collaborative team and attaining project goals. Utilising effective planning, organising and execution skills, I always ensure effective delivery of all projects. Below are some projects which I have successfully completed during my tenure with PitechPlus.

#### ***Data Linkage and ETL Process (Ongoing Project) - Business Analyst and Developer***

I am presently working on this project, as business analysts and developer, where I am accountable for researching, analysing, implementing and testing different ETL solutions for big data migration from MSSQL Server into Cassandra. I am actively involved in identifying and providing best performance solution for data linkage in DSE with SOLR integration. My one of the role included writing business requirement specifications and documenting the research on the whole process. By utilising various ETL solutions, I am facilitating initial import and C# development for the daily differential modifications on the data. Implementation of Solr Indexation assisted in accessing data for initial import and the daily differential one. Also, I have implemented data linkage process using Cassandra Collections.

### ***Administration Application for Processing Official Archives - Business Analyst and Database Consultant (Paris, France)***

In this project, I was accountable for analysing business requirements and accordingly providing tailored solutions. I have followed behaviour-driven development approach to design application components in an agile environment. Implementing and delivering change in the project through developing business requirement specifications enabled in effective project management. With effective implementation and administration of various applications, I was successful in analysing and processing project related data in data warehouse. Accurate designing and development of data warehouse, enabled in integrating all specified business requirements. I played an integral role in ensuring effective performance of new processes and minimising load/processing times through optimisation of database. My major achievements, included implementing maintenance system and disaster strategies; modifying different existing programmes and applications; facilitating process related technical and user documentation as well as estimating new requirements and the impact of implementing new features

### ***Genealogical Application Project - Team Lead (Cluj-Napoca, Romania)***

I undertook responsibility of managing and directing a team of 4 acting as a link between company, customers and development team. My basis duties included preparing daily workloads, allocating work to staff, researching and recommending software tools/ideas as well as monitoring team performance and providing report to the senior management. I am actively involved in encouraging and directing team members towards attaining excellent performance targets. Developing and facilitating training documentation and database tutorials related to project helped in enhancing skills and expertise of new and existing employees I have ensured effective version control through GIT.

### ***Genealogical Application project - MS SQL Developer/ DBA / .NET Developer (Cluj-Napoca, Romania)***

In this project, I was successful in developing and providing technical design of genealogical databases while being involved in designing new screens and features. Steering development of stored procedure assisted in managing different features in a genealogical website. Also, I have identified issues relating to the performance and recommended effective recommendations to troubleshoot such issues using SQL tools, statistics, execution plans, trace and index tuning. Development and maintenance of scripts and jobs for database maintenance as well as designing physical database schema and data modelling was one of my main role in this project.

### ***Global tool for generating CV in different formats - MS SQL Developer / .NET Developer (Cluj-Napoca, Romania)***

In this role, I acted as a lead member in designing and developing DB as well as facilitating CV templates as customised reporting services files. My other duties included, providing documentations and presentations on new tools, also using TFS for version control. I have a hands-on experience in designing DB and integrating all the stored procedures to ensure efficient operation of report builder templates and web application.

## **EDUCATION**

---

**2010 – 2013** Masters in Mathematics and Computer Science (Database), UBB, Babes Bolyai University, Cluj-Napoca, Romania

**2006 – 2010** Bachelors in Mathematics and Computer Science, UBB, Babes Bolyai University, Cluj-Napoca, Romania

## **Certifications**

- 
- 2016 Microsoft Certification 070-463 - Implementing a Data Warehouse with Microsoft SQL Server 2012
  - 2015 Microsoft Certification 070-462 - Administering Microsoft SQL Server 2012 Databases
  - 2014 Microsoft Certification 070-461 - Querying Microsoft SQL Server 2012
